

产品简介 OVERVIEW

H/CL -高性能版能

Mini- , Nano-可以

放在手心的控制器 SDK或通

Adhering to the simple and easy-to-use design style of Feinixs, the stepping controller provides a variety of options for different application scenarios: The H/CL - High-Performance Version supports a variety of complex motion operations, and is compatible with stepper stages equipped with linear encoders to achieve full closed-loop control, meeting the requirements of high-precision applications. The Mini Version reduces the device volume while providing expansion interfaces for various peripheral devices, making it ideal for integrated applications with limited installation space.Feinixs provides feature-rich supporting software to control the displacement stage, You can also carry out secondary programming development through the standard SDK or communication pr
